

# VEKTOR VAULT

*Designed for Compliance*

*Manage Data Integrity, Models and Methods with  
Version Control in One Central System*

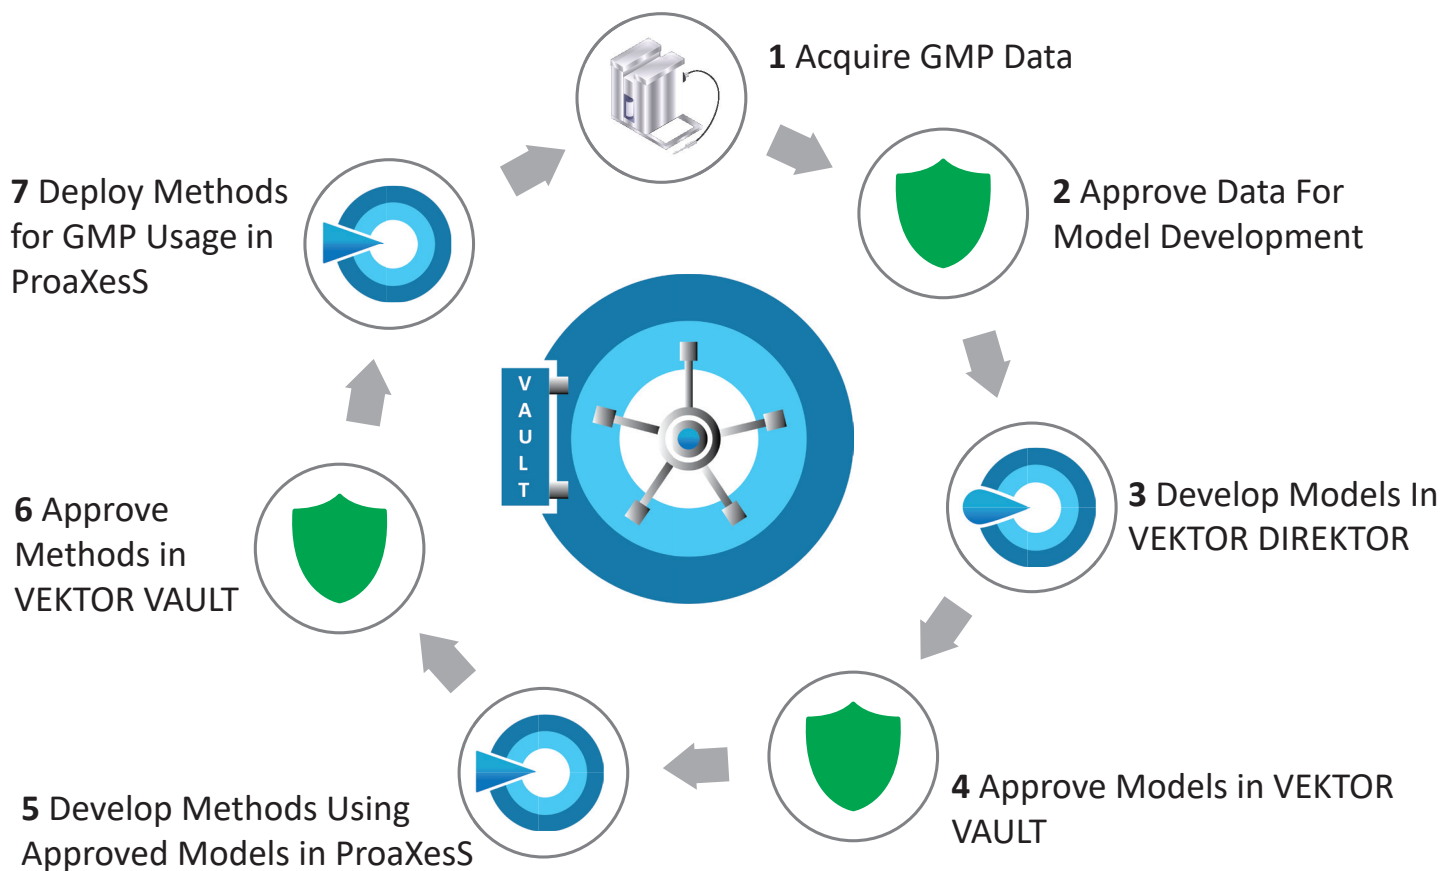

**KAX Group**

*Multivariate Analysis With Direction and Purpose*

# What is VEKTOR VAULT?

## Data, Model and Method Approval and Version Control

## Why Use VEKTOR VAULT?

VEKTOR VAULT is vendor agnostic which means you can integrate instruments and data sources from any supported vendor. Contact KAX Group for a complete list.

Acquired data generated from approved sources can be approved for model development in a GMP environment and tested prior to deployment.

Approved models can then be used to develop ProaXesS Methods and then approved in VEKTOR VAULT prior to deployment.

In this way, you can meet all of your data quality, data management and data governance requirements, along with end-to-end data acquisition to modelling to deployment needs in one software platform, under one lifecycle model.

**Acquire**

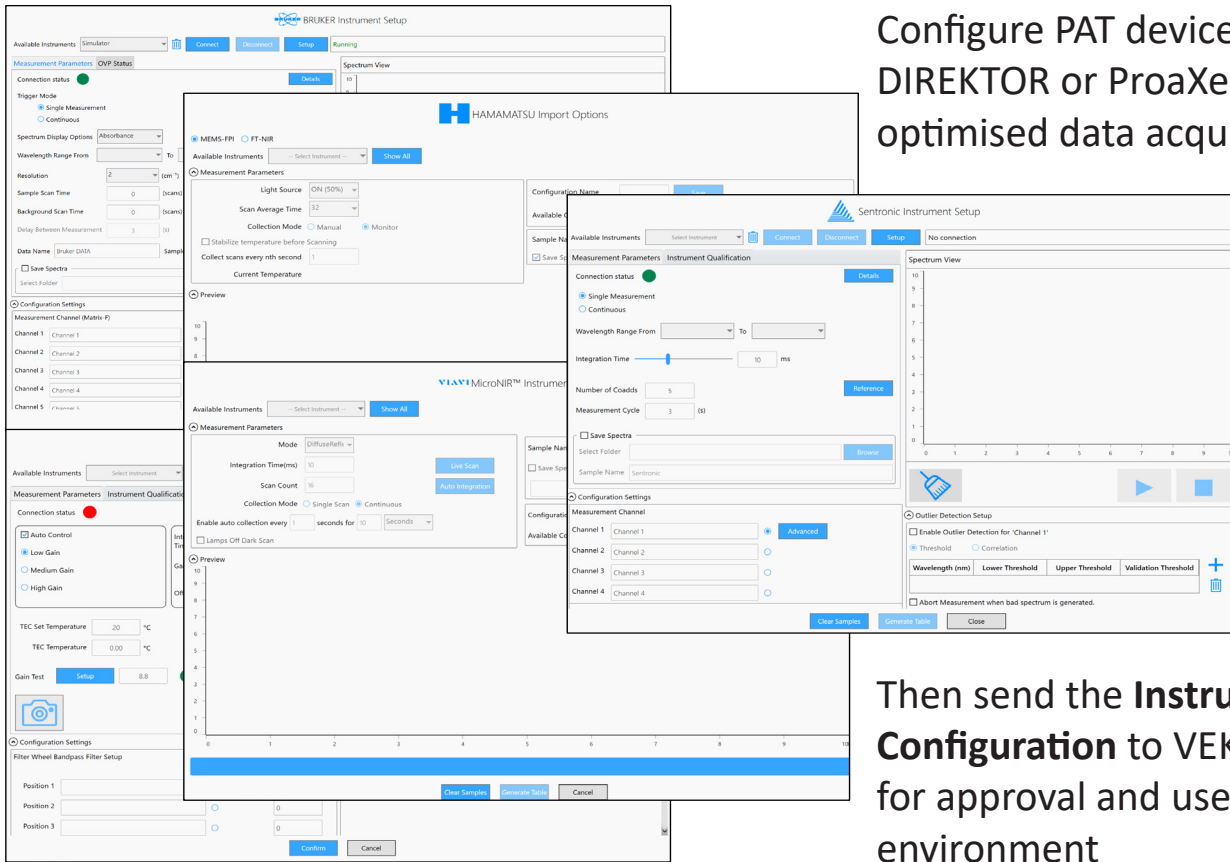

**Approve**

**Deploy**

**Manage**

# It Starts With Data Acquisition

## Many Instrument Types Supported

Configure PAT devices in VEKTOR DIREKTOR or ProaXesS for optimised data acquisition.

Then send the **Instrument Configuration** to VEKTOR VAULT for approval and use in a GMP environment

VEKTOR VAULT ensures only validated and approved configurations are used for data acquisition.

## Validate Predictive Models Using Approved Data

Develop Models in  
VEKTOR DIREKTOR  
from Approved Data

Simple Approval Process

Name	Vault Name	Version	Type	Status	Approved By
1BGPP PCA	PCA - 1		Model	✓	vtu_approver1
1BGPP	Test Data_Amend		Data	✓	vtu_approver1
Template Test VAULT	Normalisation		Preprocess	✓	vtu_approver1
1BGPP	Test Data_Amend 1		Data	✓	vtu_approver1

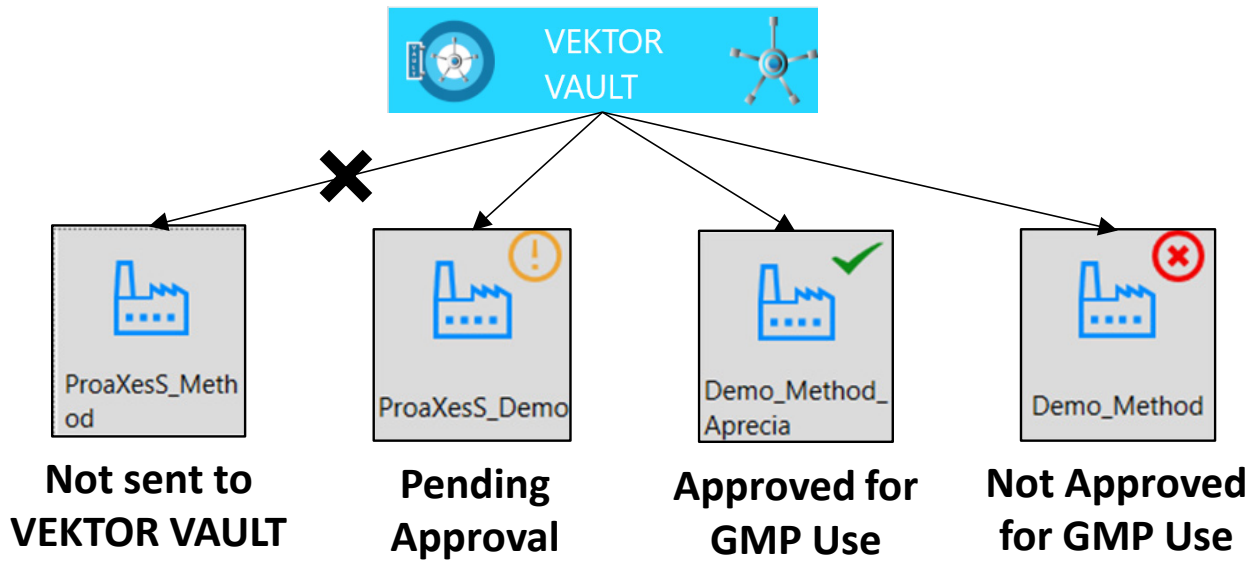

Send Model to  
VEKTOR VAULT  
for Approval

Use Approved Models  
in GMP Ready ProaXesS  
Methods

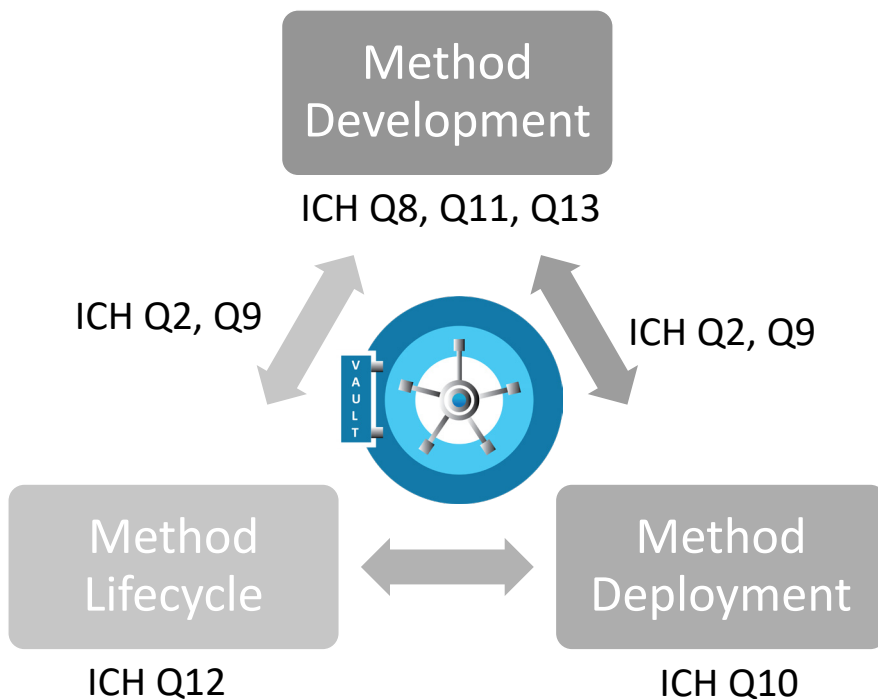

# Generate And Approve GMP Ready ProaXesS Methods

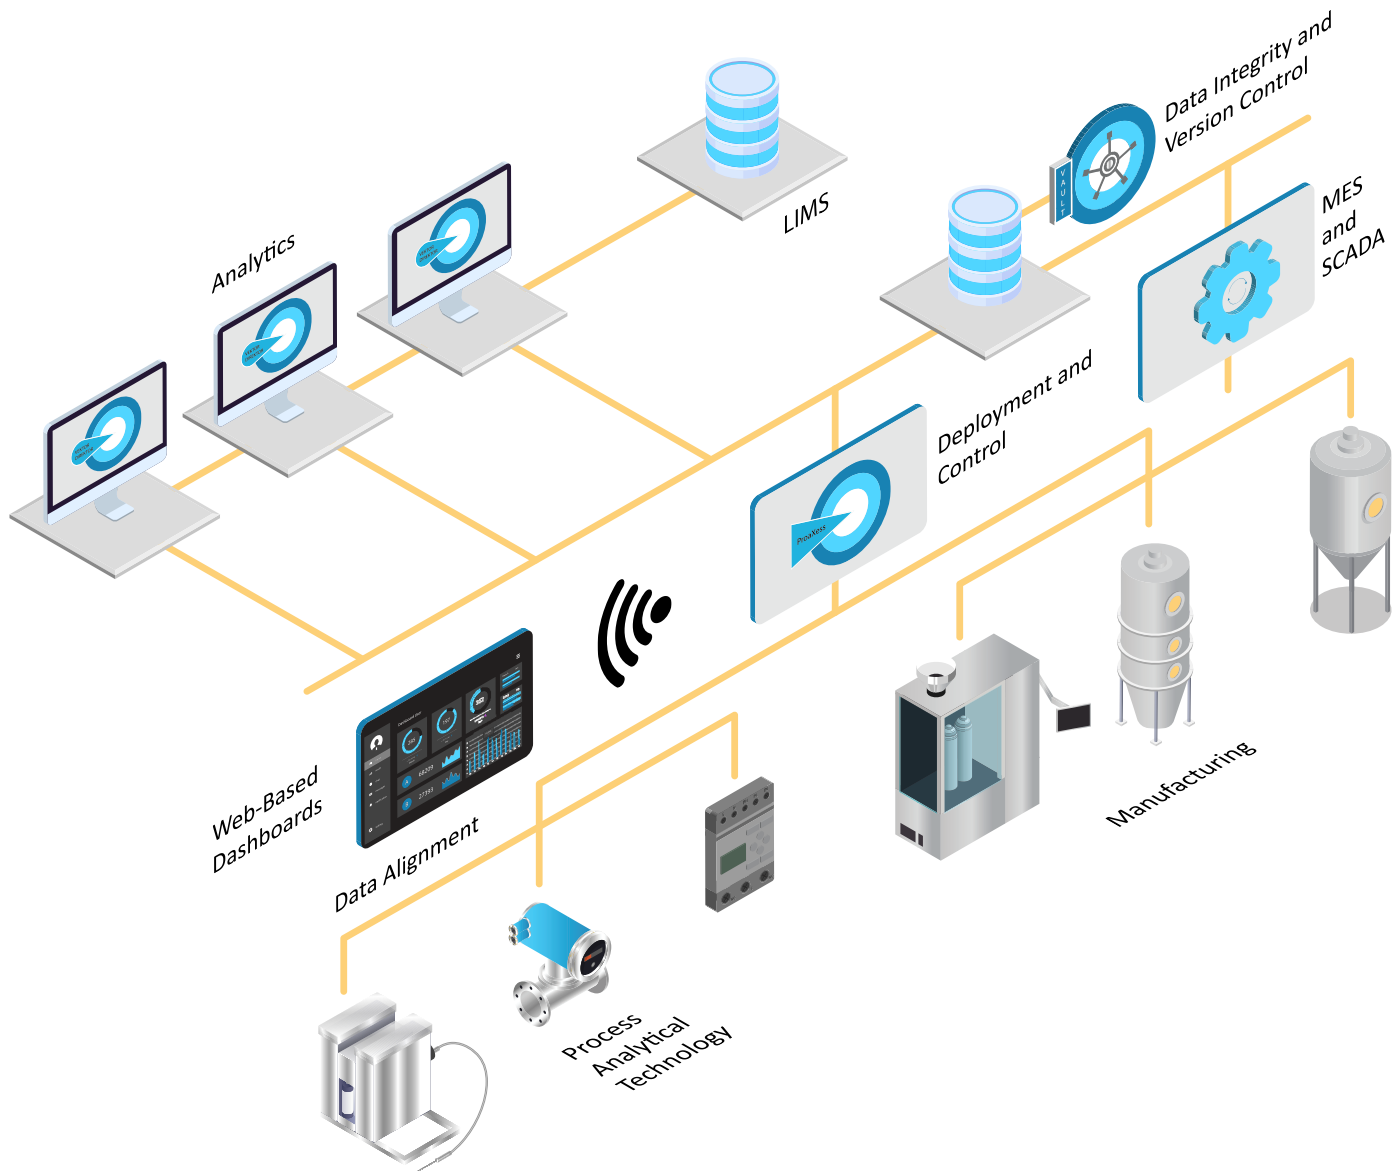

*Visual Indicators Of Approval Status Make It Easy To Distinguish Sandbox Methods From GMP Ready Methods During Implementation and Deployment.*

## Full Model and Method Lifecycle Maintenance System

*VEKTOR VAULT  
Securely Maintains  
Your Data Assets So  
You Can Meet Your  
Compliance  
Requirements.*

# The PATForm Advantage

The PATForm by KAX Group is the complete end-to-end data acquisition to deployment platform allowing users to integrate their preferred PAT instruments and sensors into one platform that is centrally managed by the VEKTOR VAULT Data Integrity System. This is achieved through,

- Integration of PAT instruments and sensors into VEKTOR DIREKTOR and ProaXesS templates for consistent and validated data acquisition.
- Secure import of approved data into VEKTOR DIREKTOR for model development.
- Use of approved Models in ProaXesS for Method Development.
- Deployment of Approved Methods for Quality Assessment in a GMP environment.
- Use of data acquired in real time for model and method redevelopment under a Model/Method Lifecycle Model all managed by VEKTOR VAULT.

# VEKTOR VAULT

*Data Integrity, Model Management and Version Control System*

## System Requirements

Supported Operating Systems	Windows 8.1, 10, 11 , Windows Server 2012 R2, 2016, 2019, 2022
Memory (RAM)	16 GB Minimum
Processor	x64
Application Hard Disk Space	1 GB Free space minimum for installation for VEKTOR VAULT
Data Storage	Microsoft SQL database or other database schema
Security	Windows Authentication, Active Directory, Biometric Security, Two-Factor Authentication.
Web Browser	Microsoft Edge, Chrome, Firefox
.NET Framework	8.0
